

# Fougères Laboratory

---

↳ The Fougères Laboratory works to further knowledge of the veterinary medicinal products and disinfectants used by the food processing industry. It studies the benefits and risks associated with the use of these products. The laboratory also analyses the effects of antimicrobials (antibiotics and biocides) on the multiplication of resistant bacteria. Lastly, it characterises the toxicological hazards associated with chemical contaminants.

**Key figures**

## Main missions

- Detecting residues of veterinary medicinal products in foods of animal origin.
- Assessing the efficacy of antibiotics and disinfectants against microorganisms.
- Studying the resistance of bacteria to antibiotics and disinfectants.
- Assessing the toxicity of chemical contaminants.
